

Summer of Adventure 2022!

All little explorers (ages 2-6 years) are invited to join us on our summer of adventures! Each week we will explore new and exciting places, experiencing the wonders of our world and keeping a field journal along the way to document our discoveries! Each week will include sensory activities, hands on group learning projects, art, music, cooking and STEM! Grab your adventure buddies and come along!

WEEK 1 (June 20- June 24): Forest! Don't forget to pack the essentials as we camp in the forest! This week is all about the great outdoors. Students will be exploring the forest habitat, learning about some of our country's awe-inspiring national parks and roasting marshmallows with some of their best buds.

WEEK 2 (June 27- July 1): Outer space! 3...2...1...BLAST OFF! Students will experience out of this world activities that will excite these soon to be astronauts. We will travel around the solar system, encounter meteors, asteroids, and we will even practice shooting rockets into the sky!

WEEK 3 (July 5- July 8): The City! We spend most of our adventures exploring the natural wonders of our world but this week we will look at what it takes to build our cities! From the tallest buildings to expansive bridges and highways, we will explore some famous landmarks in our nation's biggest cities and try our hands at building our own!

WEEK 4 (July 11- July 15): Arctic! As the summer gets HOT, we'll get cool by learning about the frozen tundra. No need to pack those mittens and earmuffs, students will learn about arctic animals, make their very own frozen treats and create art using ice!

WEEK 5 (July 18- July 22): Desert! Hop on the caravan! This week we will explore all the desert has to offer and the amazing creatures and plants that live there!

WEEK 6 (July 25- July 29): Safari! Lions, Giraffes & Rhinos...OH MY! This week students will take a ride through the safari learning about a new animal each day and their habitat. Adventure is out there and so are we!

WEEK 7 (Aug 1- Aug 5): Garden! Honey, I shrunk the kids! This week we get teeny, tiny to explore the bugs that help make our gardens grow. From worms and bees to ladybug and butterflies we will see how each tiny creature plays a BIG part in our lives. We will even watch the life cycle of some of these bugs right before our eyes!

WEEK 8 (Aug 8- Aug 12): The Beach! We are ending our Summer Camp with a SPLASH! Students will dive deep into learning about the Pacific ocean, sea shells and sand.
